New Features in Vault V11 API (10.5.4 Release)

Release Date: January 23, 2015

We are pleased to bring you the following enhancements to the V11 API in this week's release. Refer to the Vault Release Notes for additional information about the 10.5.4 release. See the Vault Developer Portal for API documentation.

Attachments on Documents and Object Records

In this release, we introduce document and object record attachments. Attachments provide a simple way to upload and associate related files with existing documents or object records without the overhead of Vault's full document management capabilities.

New Object and Fields to Support Form 2253 in PromoMats

When 2253 Submissions are enabled in PromoMats vaults, a new object is added: *2253submissionapplicant__v*.

New Object and Fields to Support Form 2253 in Submissions

Submissions vaults include a new *promotional_labeling_advertising__v* field within *submission_type__v* picklist field in the *submission__v* object. Within the

💬 Feedback

application_type__v picklist field in the *application__v* object with the following values have been added:

- New Drug Application (*nda__v*)
- Abbreviated New Drug Application (*anda__v*)
- Abbreviated Antibiotic Drug Application (*aada__v*)
- Biologics License Application (*bla__v*)
- Premarket Approval Application (*pma__v*)

New Fields in the Document Metadata API

A new boolean field has been added to the *engage_presentation__v* document type: *crm_enable_survey_overlay__v*. The new field allows API users to indicate if a CLM Survey Overlay should be applied when the CLM presentation is displayed in Veeva CRM.

A new number field has been added to the *engage_presentation__v* document type: *crm_related_content_display_order__v*. The new field allows API users to set the display order in the Engage Player Related Content navigation bar when the Engage Presentation is integrated with Veeva CRM.

New Values in the Document Picklists API

The two new picklist values have been added to the *crm_disable_actions__v* field on the *slide__v* document type: *zoom__v* and *rotation_lock__v*. The new picklist values allow API users to disable Zoom and Portrait modes on a multichannel slide for iRep integration.

A new picklist value has been added to the *email_template_type__v* field on the *email_template__v* document type: *medical_inquiry_template__v*. The new picklist value allows API users to designate an Email Template as a Medical Inquiry Template.

Notable API Fixes

Issue	Description
DEV-47844	When initiating lifecycle actions and encountering errors, Vault nests some error responses within other error responses instead of listing each error separately.
DEV-50298	After creating and deleting a picklist value with more than 40 characters, recreating the picklist with the same value results in an error response.
DEV-52313	When creating and deleting a picklist value which has been selected for an existing document, the value remains on the document but the API returns a null response on the field.
