New Features in Vault V11 API (10.5.5 Release)

Release Date: February 12, 2015

We are pleased to bring you the following enhancements to the V11 API in this week's release. Refer to the Vault Release Notes for additional information about the 10.5.5 release.

Updates to Objects API

Vault Objects API now includes the *milestone__v* object in eTMF vaults. The *milestone__v* object allows users to specify key milestones at the Study, Study Country, and Study Site levels. Those milestones are related to documents so TMF completeness can be measured and reported on per milestone.

Updates to Picklists API

Vault Picklists API now includes *milestone_type__v*. The new picklist is configured on the *milestone__v* object and *base_document__v* document type. The *milestone__v* picklist values can be configured through the API or UI.

Notable API Fixes

Issue	Description	💬 Feedback

DEV-51856	The document API now properly exposes the available renditions for all document versions.
DEV-54762	The *user_needs_to_change_password__v* field now returns false instead of null when users aren't required to change their passwords.
DEV-55168	When performing an API query in with unusually large numbers of fields in the SELECT clause in V10.0, some users experience a slow response time or receive an error message. We've addressed this issue by dynamically scaling down the requested page size when the total memory size occupied per page stresses the memory limit of the system.
