New Features in Vault V14 API (14.0.0 Release)

Release Date: March 4, 2016

We are pleased to bring you the following enhancements to the V14 API in this week's release. Refer to the [Vault Release Notes](#) for additional information about the 14.0.0 release. See the [Vault Developer Portal](#) for API documentation.

Vault Transactions API

Vault limits the number of API calls that can be made every 5 minutes and every 24 hours. When either of these limits are reached, the API returns an `API_LIMIT_EXCEEDED` error message and no further calls will be processed until the next 5 minute or 24 hour period begins.

- The default limit every 5 minutes is 2000 calls.
- The default limit every 24 hours is 100,000 calls.

The limits are configured on each individual vault in a domain.

In this release, we've added functionality which exposes these limits. In the header of every response, the API now shows the number of calls made and the number remaining.

 [Feedback](#)

We've also added a new GET `api/{VERSION}/limits` request to retrieve the maximum number of records that can be created per object and the maximum number of custom objects which can be created in the vault.

Notable API Fixes

Issue	Issue No.
When querying for the latest version of a document, more than one document is returned.	DEV-88814
When using the API to create binders from templates, the binder template sections are not always applied to the binder.	DEV-86225
