New Features in Vault V15 API (14.5.3 Release)

Release Date: June 3, 2016

We are pleased to bring you the following enhancements to the V15 API in this week's release. Refer to the Vault Release Notes for additional information about the 14.5.3 release. See the Vault Developer Portal for API documentation.

Vault Objects API: Cancel Submission Import & Removal

API v14 introduced a new set of endpoints supporting import and removal of submission packages in SubmissionsArchive vaults. In this release, we've added a parameter to cancel those in queue and in progress, allowing developers to quickly react to errors encountered during the import of submissions or the migration of multi-sequence applications.

Document Metadata API: Lookup Field Type

In this release, we've introduced a new lookup field type for documents. This field "looks up" to an attribute of an object record already associated with a document and brings that value down to the document as a distinct, read-only field. Lookup fields allow for more precise usage of Document Dynamic Access Control, Field Dependencies, Search Filtering, and other document field-related capabilities.
