New Features in Vault V15 API (15.0.0 Release)

Release Date: June 24, 2016

We are pleased to bring you the following enhancements to the V15 API in this week’s release. Refer to the [Vault Release Notes](#) for additional information about the 15.0.0 release. See the [Vault Developer Portal](#) for API documentation.

Vault Objects API: Object Types

In this release, an object can be have “object types.” Each object type is a collection of fields that are grouped to capture similar data, but used across multiple business groups. For example, the *Product* object may include two types: *Pharmaceutical Product* and *Medical Device Product*. These two object types share some fields, but *Pharmaceutical Product* and *Medical Device Product* each have their own specific fields. Business groups can now not only manage data specific to their business in a more efficient manner, but can also easily report on records for one specific object type or all object types.

Notable API Fixes

Issue	Issue No.
Querying Vault for workflows using workflow date and time filters returns inaccurate results.	DEV-28802
