New Features in Vault V16 API (15.5.3 Release)

Release Date: September 9, 2016

We are pleased to bring you the following enhancements to the V16 API in this week's release. Refer to [Vault Release Notes](#) for additional information about the 15.5.3 release.

Legal Hold

This release we introduce a new feature: Legal Hold. While a document is in legal hold, users cannot delete any part of it (past versions, annotations, renditions, etc.), including through the API. Attempting to delete content which is currently in legal hold will result in an error.

Apply EDL Templates for Milestones

This feature adds a new endpoint which allows API users apply an EDL (expected document list) template to a *Milestone* object record. With this feature, users can implement milestone-based planning of expected documents more effectively.

Learn more in the [Vault Developer Portal](#), or learn more about [EDL templates in Vault Help](#).

 [Feedback](#)

Object Workflow Task Comments

Admins can now configure object workflows which allow task owners to enter comments when completing a task. API users can complete these tasks and enter comments through the API.

Notable API Fixes

Issue/Fix	Issue No.
Renaming a file through FTP can cause pre-processing failures where name duplicates may already exist. These failures may cause a document to have the wrong source file.	DEV-103163
