New Features in Vault V16 API (15.5.4 Release)

Release Date: October 7, 2016

We are pleased to bring you the following enhancements to the V16 API in this week's release. Refer to [Vault Release Notes](#) for additional information about the 15.5.4 release.

Configuration Migration Packages

Configuration Migration Packages allow an Admin to migrate configuration changes between two vaults. There are four new endpoints to execute configuration migration in the API: Export Package, Import Package, Deploy Package, and Retrieve Package Deploy Results.

View the new Configuration Migration endpoints in the [Developer Portal](#).

Notable API Fixes

Issue/Fix	Issue No.
When creating a user with the Bulk User API, if the new user is created as a member of any vault other than the vault the original user was logged into, then that user will not have a profile picture set in those vaults.	DEV-63944
Documents can fail to return from a paginated VQL query if the document's version changes after the initial query. To combat this, we now correctly report the "size" property of the response to reflect the actual number of records returned.	DEV-109937
VQL queries using SCOPE ALL return an UNEXPECTED_ERROR under certain	 Feedback DEV-108914

conditions.
