New Features in Vault v17.2 API (17R1.2 Release)

Release Date: May 5, 2017

We are pleased to bring you the following enhancements to the new v17.2 Beta API in this week's release. Refer to Vault Release Notes for additional information about the 17R1.2 release.

Vault Compare API

This new endpoint allows Admins to compare the configuration of two vaults. For example, an Admin could use this comparison to determine differences between environments in order to build a Configuration Migration Package, or to validate that environments are synchronized after a package deployment. The output of the comparison is an Excel export. As of this release, the feature is enabled in the API only.

Documents

Prevent Deletion of Checked out Document

Vault now protects documents in an editing process by prohibiting Delete on checked out documents, unless a user has the Power Delete permission. Vault enforces this protection in the API as well as throughout the UI.

💬 Feedback

Cart Filter

When retrieving documents through the API, users can now apply a filter to return only the documents in the current user's Cart.

Notable API Fixes

Issue/Fix	Issue No.
In some cases, fields which must be unique were allowed to repeat.	DEV-127820
In rare cases, API calls with multipart requests return an unexpected error. To fix, we made a configuration change which allows special characters to be passed to the backend instead of getting truncated.	DEV-135608
