New Features in Vault v17.2 API (17R2 Release)

Release Date: June 30, 2017

We are pleased to bring you the following enhancements to the new v17.2 Beta API in this week's release. Refer to Vault Release Notes for additional information about the 17R1.4 release.

Custom roles

In API v17.1, users can only apply manual assignments on standard roles (`owner__v`, `viewer__v`, and `editor__v`). In v17.2, we've added new API endpoints to apply manual assignments on any role (standard or custom) on object records.

Even though the existing object API endpoints (Retrieve, Create, Update, and Delete Object Records) allow manual assignment on standard roles, it is best practice to use the new API endpoints to update manual assignment on both standard and custom roles.

Error handling change

Previously when using the `/api/{version}/vobjects/` endpoint, a body with both invalid fields and invalid manual assignments would show errors for both in the response.

💬 Feedback

As of the 17R1.4 release, field and manual assignment validation are completed as separate actions. As a result, the API displays either field validation errors or manual assignment errors, not both. If the body contains errors for both, only the manual assignment errors are returned.

This change affects all versions of the API.
