## New Features in Vault V7.0 API (6.5.2 Release)

*Release Date: July 17, 2013*

We are pleased to bring you the following enhancements to the V7.0 API in this week's release.

### Renditions for Prior Document Versions

The Document Renditions API now allows users to access and manage renditions for prior versions of a document. Users can download, upload, replace, and delete renditions where they have the correct permissions on the document.

### New `in_migration_v` Property in Study Catalog (eTMF)

The Study Catalog API now exposes the `in_migration_v` property. Vault uses this property, alongside the `active_v` property, to enforce licensing limits in eTMF vaults.

### API Bug Fixes

| Issue | Description   |
|-------|---|
| 16454 | The <code>user_language_v</code> property is now a required property of the User object.                              |
| 17084 | Vault no longer returns unnecessary <code>errorType</code> and <code>errorCodes</code> fields in non-error responses. |

 Feedback

17874

The User API now correctly returns the `active__v` and `user_type_id__v` properties.
